# DESIGN AND ANALYSIS OF ALGORITHMS

## LAB III SEMESTER

---

Name : Vardhan Ingole

Section : A4\_B3

Roll No : 43

Practical No : 07

**Aim :** Implement Hamiltonian Cycle using Backtracking.

**Task 1 :**

The Smart City Transportation Department is designing a night-patrol route for security vehicles.

Each area of the city is represented as a vertex in a graph, and a road between two areas is represented as an edge.

Code :

```
#include <stdio.h>

#define MAX 10

int n;
int G[MAX][MAX];
int x[MAX];
```

```

void NextValue(int k)
{
    int j;

    while (1)
    {
        x[k] = (x[k] + 1) % (n + 1);

        if (x[k] == 0)
            return;

        if (G[x[k - 1]][x[k]] != 0)
        {
            for (j = 1; j < k; j++)
            {
                if (x[j] == x[k])
                    break;
            }

            if (j == k)
            {
                if ((k < n) || (k == n && G[x[n]][x[1]] != 0))
                    return;
            }
        }
    }
}

void Hamiltonian(int k)
{
    int i;

    while (1)
    {
        NextValue(k);

        if (x[k] == 0)
            return;

        if (k == n)
        {
            printf("\nHamiltonian Cycle: ");
            for (i = 1; i <= n; i++)
                printf("%d --> ", x[i]);
            printf("%d", x[1]);
        }
        else
            Hamiltonian(k + 1);
    }
}

```

```

    }

}

int main()
{
    int i, j;
    char ch = 65;

    printf("Enter number of vertices: ");
    scanf("%d", &n);

    printf("Enter adjacency matrix of the graph (%d x %d):\n", n, n);
    for (i = 1; i <= n; i++)
    {
        for (j = i; j <= n; j++)
        {
            if (i != j)
            {
                printf("[%c][%c] = ", ch + i - 1, ch + j - 1);
                scanf("%d", &G[i][j]);
                G[j][i] = G[i][j];
            }
            else
            {
                G[i][j] = 0;
            }
        }
    }

    for (i = 1; i <= n; i++)
        x[i] = 0;

    x[1] = 1;

    printf("\nAll possible Hamiltonian cycles:\n");
    Hamiltonian(2);

    return 0;
}

```

## Test Case 1:

```
INTERPRETER-III
● Enter number of vertices: 5
Enter adjacency matrix of the graph (5 x 5):
[A][B] = 1
[A][C] = 1
[A][D] = 0
[A][E] = 1
[B][C] = 1
[B][D] = 1
[B][E] = 0
[C][D] = 1
[C][E] = 0
[D][E] = 1
```

All possible Hamiltonian cycles:

```
Hamiltonian Cycle: 1 --> 2 --> 3 --> 4 --> 5 --> 1
Hamiltonian Cycle: 1 --> 3 --> 2 --> 4 --> 5 --> 1
Hamiltonian Cycle: 1 --> 5 --> 4 --> 2 --> 3 --> 1
Hamiltonian Cycle: 1 --> 5 --> 4 --> 3 --> 2 --> 1
```

```
○ PS D:\Sem_III\DAALaboratory> █
```

### Test Case 2:

- Enter number of vertices: 5  
Enter adjacency matrix of the graph (5 x 5):  
[A][B] = 1  
[A][C] = 1  
[A][D] = 0  
[A][E] = 1  
[B][C] = 1  
[B][D] = 1  
[B][E] = 0  
[C][D] = 1  
[C][E] = 1  
[D][E] = 1

All possible Hamiltonian cycles:

Hamiltonian Cycle: 1 --> 2 --> 3 --> 4 --> 5 --> 1  
Hamiltonian Cycle: 1 --> 2 --> 4 --> 3 --> 5 --> 1  
Hamiltonian Cycle: 1 --> 2 --> 4 --> 5 --> 3 --> 1  
Hamiltonian Cycle: 1 --> 3 --> 2 --> 4 --> 5 --> 1  
Hamiltonian Cycle: 1 --> 3 --> 5 --> 4 --> 2 --> 1  
Hamiltonian Cycle: 1 --> 5 --> 3 --> 4 --> 2 --> 1  
Hamiltonian Cycle: 1 --> 5 --> 4 --> 2 --> 3 --> 1  
Hamiltonian Cycle: 1 --> 5 --> 4 --> 3 --> 2 --> 1

- PS D:\Sem\_III\DAALaboratory> █

## Hamiltonian Path

Difficulty: Medium

Accuracy: 40.8%

Submissions: 46K+

Points: 4

Given an undirected graph with  $n$  vertices and  $m$  edges, your task is to determine if a Hamiltonian path exists in the graph.

A **Hamiltonian path** is a path in an undirected graph that visits each vertex exactly once.

You are provided the following:

- **n**: The number of vertices in the graph.
- **m**: The number of edges in the graph.
- **edges[][]**: A 2D list where each element edges[i] represents an edge between two vertices edges[i][0] and edges[i][1].

### Examples:

**Input:**  $n = 4, m = 4$   
edges[] [] = { {1,2}, {2,3}, {3,4}, {2,4} }

**Output:** 1

**Explanation:** There is a hamiltonian path: 1  $\rightarrow$  2  $\rightarrow$  3  $\rightarrow$  4

**Input:**  $n = 4, m = 3$   
edges[] [] = { {1,2}, {2,3}, {2,4} }

**Output:** 0

**Explanation:** It can be proved that there is no hamiltonian path in the given graph.

### Constraints:

$1 \leq n \leq 10$

$1 \leq m \leq 15$

Size of edges[i] is 2

$1 \leq \text{edges}[i][0], \text{edges}[i][1] \leq n$

```
